

# Monkeypox Virus

Monkeypox is a rare disease caused by infection with the monkeypox virus. Monkeypox virus is part of the same family of viruses as smallpox. Monkeypox symptoms are similar to smallpox symptoms, but milder; and monkeypox is rarely fatal. Monkeypox is not related to chickenpox.

## Symptoms

Monkeypox has many symptoms- the most obvious being a rash. Sometimes, people get a rash first, followed by other symptoms. Others only experience a rash. Monkeypox rash can look like pimples or blisters that appears on the face, inside the mouth, and on other parts of the body, like the hands, feet, chest, or genital area. This illness typically lasts 2-4 weeks. **Other symptoms can include:**

**Fever and Chills**

**Headache**

**Swollen Lymph Nodes**

**Exhaustion**

**Muscle and Back Pain**

**Skin Rash**

## How Monkeypox Spreads

**Monkeypox spreads in different ways. The virus can spread from person-to-person through:**

- Direct contact with the infectious rash, scabs, or body fluids.
- Respiratory secretions during prolonged, face-to-face contact, or during intimate physical contact, such as kissing, cuddling, or sexual contact.
- Touching items (such as clothing or linens) that previously touched the infectious rash or body fluids.
- Pregnant people can spread the virus to their fetus through the placenta.
- From infected animals, either by being scratched or bitten by the animal or by preparing or eating meat or using products from an infected animal.

## Prevention Steps

**Take the following steps to prevent getting monkeypox:**

- Avoid close, skin-to-skin contact or share any personal items with people who have a rash that looks like monkeypox.
- Do not touch the rash or scabs of a person with monkeypox.
- Do not handle or touch the bedding, towels, or clothing of a person with monkeypox.
- Wash your hands often with soap and water or use an alcohol-based hand sanitizer.
